

Tell me about yourself

I am Hemasundar, I am from a small town in Karur, my father is a government school teacher, my mother is a self-entrepreneur. My Sister is a BPT student. I did my schooling in Karur Vetri Vinayaka School. I did my Engineering studies in Chettinad Tech and got Bachelor's degree in Computer Science and Engineering. During my college days I am enthusiastic to participate in Service Clubs and had participated in NSS camps and did some service. And I am an open-contributor where I developed 3 websites in collaboration with my fellow friends. I had participated in many hackathons, startup events and symposiums. And I took several peer learning sessions with my classmates to make the interest in coding. Also done some personal research and did several projects out of the research. During my final year I did a capstone project along with the 6 months internship in app development and successfully completed the studies. Now I am looking for a place where I can apply and grow my skills for the common growth.

What is your key major strength and weakness

My strength is I am always enthusiastic to learn by doing things. I can easily learn and implement a technology aspect by means of hands-on. Hence in most of the time my projects got success due to directly involved in development. I am less prone to read books hence I always opted for the practical learning rather a theoretical one. My weakness is I have a little fear when exposed to new environment but I can control that and after few days I can adapt to that. It is a major problem I faced when involving as host in peer learning session. Where I learnt to somehow manage that fear. Now I am working on that to have some new exposure to control fear.

What is your biggest failure in life how did you overcome it

My Biggest failure is during my second year in college. I just drifted off from academics and spent less time in coding and projects. During that time, I addicted to PC games and that made my learning curve steep down. After my 3rd semester I got an Arrear in mathematics subjects. After getting Arrear I felt I made a huge mistake by addicted to games. After getting that I can't able to sleep properly till I cleared the exam by reappearing. Hence, I practiced to limit my gaming time for about 1 hr in a weekend but after a month I completely leaved playing games. Hence, I showed more interest in building tech community in our college and built some useful websites to my college department. It made me to bring interest in learning things.

How do you describe yourself as a person

Besides a techy guy. I believe myself as respecting person and I am a good man to my friends and families. I am a motivated and enthusiastic person. And always welcome good friendship and open hearted for helping in a good aspect. I found myself as a civic sense knowledge person and I opted to it always. I know my role in my family and working hard to having responsibility to forward my generation to the future. I always seek happiness and accepts setbacks in a sportive way. I have the nature of treating failures as challenges to make success and I implemented somewhat in my life to get into this level. I have adequate knowledge to survive in this world.

What is the major achievement in your life

I believed that I didn't achieve anything till now. But I am working hard in the silence to make my dreams true. And during my life I see every step I took upwards as a success. Because I believe the analogy of circle of wishes hence there is no particular achievement. But I want to make my parents proud I see that is my major achievement in life. Hence, I am working for that achievement. And I am sure someday I will make it.

What is your short time and long-time goal

My short time goals are to have a good job with a descent salary. And my long-term goal is to become money independent and becoming an entrepreneur.

Have led any event, or any team player

During my college days, I led the tech community called as SDC (Software Development Centre) in my college and gathered some students to make projects for the college department. I gathered 4 students to help me in making library management. During that I brought interest and some experience to my team members. After finished the first website in our college. Some other students wished to join our tech community after that during our college Inter college tech competition many students presented their projects in the enthusiastic way. Hence, I created the enthusiasm on the students in the technology learning by hands-on. Also, me and my friends introduced the trend of creating developer portfolios in our college which led to having portfolio development sessions hosted my me and my friends.
